

AlarmCAD No-Key Licensing

With the new no-key licensing you do not need to plug in a USB key to operate AlarmCAD.

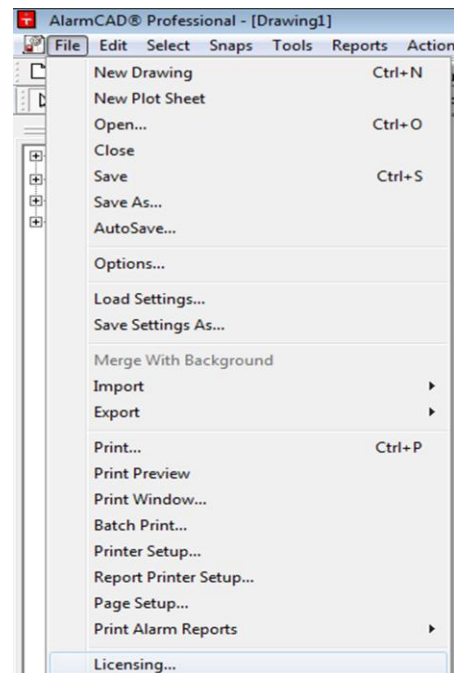

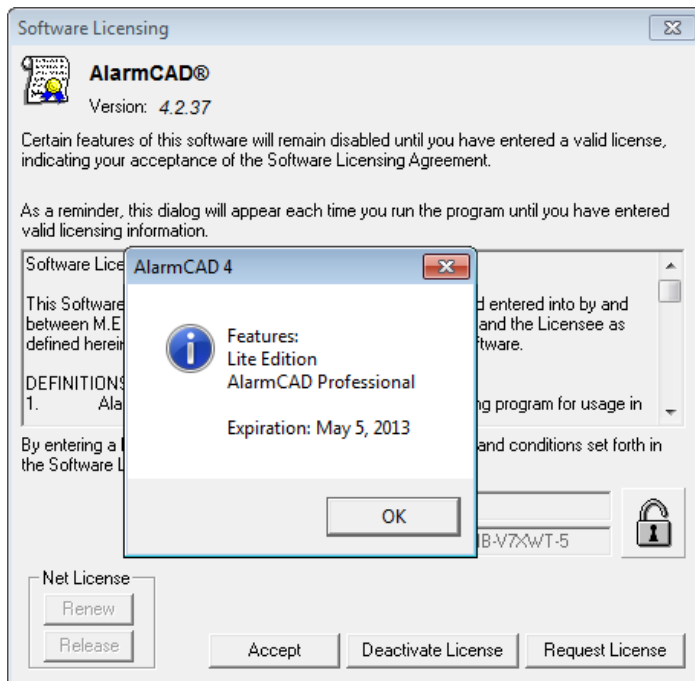

Open the software licensing form and simply enter the activation code you received along with the name of the licensee. Click on the Accept button and the license will activate over the internet.

You must have an internet connection to Activate and Deactivate a license.

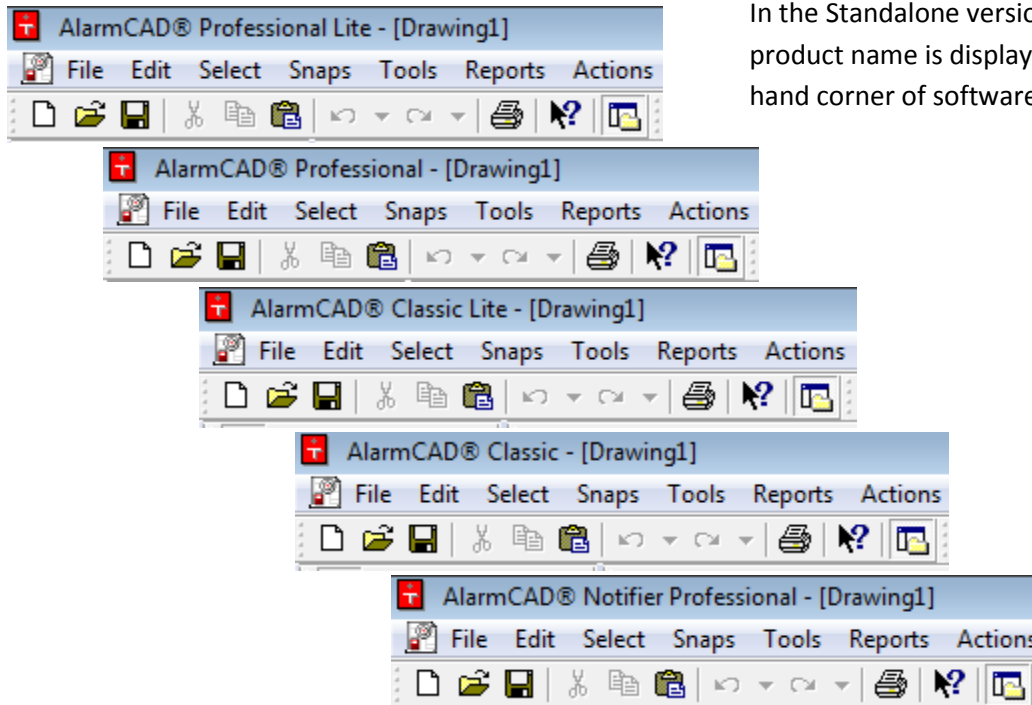

You can use the Deactivate and Activate feature to move the license to another machine at work or home. Once a license has been deactivated on a machine it must be reactivated to resume the full features of an active license.

Once the license is active you can check the expiration date of the license and what features are included by clicking on the padlock symbol to the right of the licensee and activation code.

The licensing form may be found at:
File > Licensing

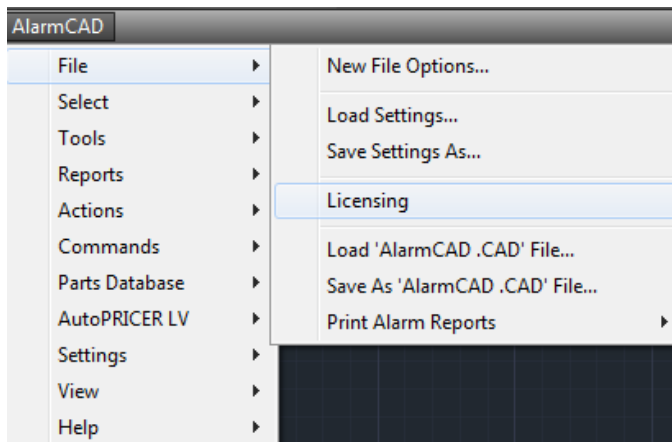

AlarmCAD No-Key Licensing

In the Standalone version of AlarmCAD the product name is displayed in the upper left hand corner of software title block.

AlarmCAD for AutoCAD

In the AlarmCAD for AutoCAD version the license is found under:
AlarmCAD > File > Licensing

The no-key licensing system allows you to load AlarmCAD on several machines and also use either Standalone or AlarmCAD for AutoCAD software with the same software license key. Simply move the license to the machine needing AlarmCAD and activate the license. (The license must be available by deactivating first. The machine must be connected to the internet to successfully activate and deactivate an AlarmCAD license.)
